

Syllabus Module 230 Major B ISB: Multi Level Analysis

230	Multi Level Analysis
Coordinator	Jay S KAUFMAN, PhD, Professor of Epidemiology McGill University, Canada With the collaboration of Tarik Benmarhnia, PhD Assistant Professor, School of Medicine & Scripps Institution of Oceanography, University of California San Diego, USA.
Dates	December 16 th to 20 th , 2019
Credits/ECTS	3 ECTS
Duration or Course Format	5 days of 6 hours = 30 hours
Location	EHESP 20 Avenue George Sand 93210 LA PLAINE ST DENIS
Description	Multilevel analysis has emerged as a useful analytical technique in several fields, including public health and epidemiology. Multilevel analysis allows for clustered data that represents a hierarchical structure, and allows for measurements at each level and effect estimate or predicted values at each level. The techniques also apply equally to data nested within individuals, as in a longitudinal setting and policy evaluation using quasi-experimental methods.
Prerequisites	Advanced core in Biostatistics and in Epidemiology. Study designs and effect estimations have to be known by students .
Course learning objectives	At the end of the module, the students should be able: <ul style="list-style-type: none"> - Apply and fit multilevel and clustered data regression models using the STATA software package - Develop methods for hierarchical data analysis - Obtain predicted values and interpret estimated coefficients as epidemiologic parameters - Specify marginal models or cluster-specific models as appropriate - Test different models with random effects, especially linear and logistic models for additive and multiplicative effect parameters - Use fixed effect models to analyse panel data - Use Difference-in-differences and extensions to evaluate public policies - Evaluate heterogeneity in the impact of public policy on socioeconomic inequalities in health
Structure (details of sessions title/speaker/date /duration)	As described, below, all morning four hour sessions consist of lectures provided by Dr Jay Kaufman (from Monday to Wednesday) and Dr. Tarik Benmarhnia (Thursday and Friday), and the 3.5 Hour afternoon sessions are for lab exercises, with Dr Kaufman and Dr. Tarik Benmarhnia. Outlines per lecture are given below Session 1. J Kaufman's Lecture includes what follows: <ul style="list-style-type: none"> - Review of Regression Modeling in Epidemiology - Mean Square Error and Bias/Variance Trade-Off - James-Stein and Empirical Bayes Shrinkage - Non-Collapsibility of the Odds Ratio - Marginal versus Conditional Estimators - Simpson's Paradox and Selection Bias - Hierarchical Data Models - Random Effects ANOVA Session 2. Practice 3H30, Dr Kaufman Session 3. J Kaufman's Lecture includes what follows <ul style="list-style-type: none"> - Fixed Versus Random Effects - Empirical Bayes Prediction

	<ul style="list-style-type: none"> - Parameter Estimation and Model Fitting - Intraclass Correlation Coefficient - Discussion of Merlo et al 2006 - Random Intercept Models with Covariates - Between and within effects of Level-1 covariates <p>Session 4. Practice 3H30, Dr Kaufman</p> <p>Session 5. J Kaufman's Lecture, includes what follows</p> <ul style="list-style-type: none"> - Cluster-level confounding - Hausman Test for Endogeneity - Random Coefficient Models - Review of Effect Heterogeneity - Discussion of Merlo et al 2006 - Marginal Models - Models for Categorical Responses - Random Intercept Logistic Regression - Median Odds Ratio - Predicted Probabilities from Categorical Models - Random Effects Poisson Regression Models <p>Session 6. Practice 3h30, Dr Benmarhnia</p> <p>Session 7 T Benmarhnia Lecture includes what follows:</p> <ul style="list-style-type: none"> - Marginal Models - Causal Inference in Observational Studies and Natural Experiments - Fixed Effect for Panel Data - Interrupted Time Series Analysis - Difference-in-Differences <p>Session 8. Practice 3h30, Dr Benmarhnia</p> <p>Session 9 T Benmarhnia Lecture, includes what follows:</p> <ul style="list-style-type: none"> - Difference-in-Differences and Propensity Score - Synthetic Control Methods - Evaluating Heterogeneity in Quasi-experimental studies - Questions/Answers/Summary <p>Session 10. Final Exam 3h30, Drs. Kaufman & Benmarhnia</p>

Course requirement	Students will practice exercises in Stata software during each afternoon lab session and will do additional homework practice.
Grading and assessment	<p>Written in class exam is scheduled on 2018 Dec 20, 2:00 -5:30 pm</p> <p>Note also that students will complete a questionnaire that assesses their own and their teammates' contributions to group work. All team members will receive the same grade except if it is clear that a student has not participated effectively (attended and contributed to meetings; made timely, helpful contributions; been constructive, etc.). In that case, the student's grade will be lowered accordingly.</p>
Course policy	<p>Attendance & punctuality Regular and punctual class attendance is a prerequisite for receiving credit in a course. Students are expected to attend each class. Attendance will be taken at each class. The obligations of attendance and punctuality cover every aspect of the course: - lectures, conferences, group projects, assessments, examinations, as described in EHESP Academic Regulations http://mph.ehesp.fr EHESP Academic Regulation Article. 3). If students are not able to make it to class, they are required to send an email to the instructor and to the MPH program coordinating team explaining their absence prior to the scheduled class date. All supporting documents are provided to the end-of-year panel.</p> <p>Students who miss class are responsible for content. Any student who misses a class has the responsibility for obtaining copies of notes, handouts and assignments. If additional assistance is still necessary, an appointment should be scheduled with the instructor. Class time is not to be used to go over material with students who have missed class.</p> <p>Lateness: Students who are more than 10 minutes late may be denied access to a class. Repeated late arrivals may be counted as absences (See http://mph.ehesp.fr EHESP Academic Regulation Article. 3 Attendance & Punctuality)</p> <p>Maximum absences authorized & penalty otherwise Above 20% of absences will be designated a fail for a given class. The students will be entitled to be reassessed in any failed component(s). If they undertake a reassessment or they retake a module this means that they cannot normally obtain more than the minimum pass mark (i.e. 10 out of 20)</p> <p>Exceptional circumstances Absence from any examination or test, or late submission of assignments due to illness, psychological problems, or exceptional personal reasons must be justified; otherwise, students will be penalized, as above mentioned. Students must directly notify their professor or the MPH academic secretariat before the exam or before the assignment deadline. Before accepting the student's justification, the professor or the MPH academic secretariat has the right to request either a certificate from the attending physician or from a psychologist, or from any other relevant person (See http://mph.ehesp.fr EHESP Academic Regulation Article 4 Examinations).</p> <p>Courtesy: All cell phones/pages MUST be turned off during class time. Students are required to conduct themselves according to professional standards, eating during class time is not permitted during class time, such as course or group work.</p>
Valuing diversity	Diversity enriches learning. It requires an atmosphere of inclusion and tolerance, which oftentimes challenges our own closely-held ideas, as well as our personal comfort zones. The results, however, create a sense of community and promote excellence in the learning environment. This class will

	<p>follow principles of inclusion, respect, tolerance, and acceptance that support the values of diversity. Diversity includes consideration of: (1) life experiences, including type, variety, uniqueness, duration, personal values, political viewpoints, and intensity; and (2) factors related to "diversity of presence," including, among others, age, economic circumstances, ethnic identification, family educational attainment, disability, gender, geographic origin, maturity, race, religion, sexual orientation and social position.</p>
Course evaluation	<p>EHESP requests that you complete a course evaluation at the end of the school year. Your responses will be anonymous, with feedback provided in the aggregate. Open-ended comments will be shared with instructors, but not identified with individual students. Your participation in course evaluation is an expectation, since providing constructive feedback is a professional obligation. Feedback is critical, moreover, to improving the quality of our courses, as well as for instructor assessment.</p>
