

## Syllabus Module – ISB Multidimensional & multivariate statistical methods

N°214	
<b>Coordinator</b>	Mélanie BERTIN
<b>Dates</b>	21 to 25 October 2024
<b>Credits/ECTS</b>	3 ECTS
<b>Duration or Course Format</b>	35 hours
<b>Location</b>	EHESP 20 Avenue George Sand 93210 LA PLAINE ST DENIS
<b>Description</b>	<p>The goal is to provide knowledge and skills in performing and interpreting the results of multivariate analyses and of multidimensional exploratory methods including principal component analysis, multiple correspondence analysis and clustering analyses. More specifically, multidimensional analyses will be viewed as a statistical method used in public health to analyse high-dimensional data sets. These techniques are particularly adequate to synthesizing variables highly correlated and eliminating collinearity problem in multiple regression (i.e. creation of a composite index) or to generate groups of individuals with similar underlying patterns. Complementarity between modelling approaches and multidimensional exploratory analysis will be presented.</p> <p>Each day is designed to alternate between lectures, exercises and computer lab using R software.</p>
<b>Prerequisites</b>	Advanced module in biostatistics and in Epidemiology Basic in R or module 215 with Nolwenn LE MEUR “ <i>Introduction in R</i> ”
<b>Course learning objectives</b>	<p><b>Learning objectives:</b> at the end of the module, the students should be able to:</p> <ul style="list-style-type: none"> <li>- Identify the main difference between supervised learning (modelling approaches) and unsupervised learning (PCA/MCA/clustering) and their complementarity</li> <li>- Be familiar with the methodological concepts of the most common multidimensional methods: principal component analysis, cluster analysis</li> <li>- To perform and to interpret the results of the statistical approaches presented using R</li> </ul>
<b>Competences</b>	<p><b>Competences :</b></p> <ul style="list-style-type: none"> <li>• Uses vital statistics and health indicators effectively to increase knowledge and generate evidence about population health, including within at-risk and vulnerable groups</li> <li>• Knows how to retrieve, analyse and appraise evidence from all data sources to support decision-making</li> </ul> <p>Teaching activities :</p> <ul style="list-style-type: none"> <li>• 4 Lectures</li> <li>• 3 labs in R</li> <li>• 2 conferences</li> <li>• 1 group project.</li> </ul> <p>Evaluation :</p> <ul style="list-style-type: none"> <li>• Group project (70%)</li> <li>• Individual exam (25%)</li> <li>• Attendance, Participation &amp; Morning quiz (5%)</li> </ul>
<b>Structure</b>	Details of the sessions

<b>(details of sessions title/speaker/date /duration )</b>		<b>am</b>	<b>pm</b>
	<b>Day 1 :</b>	Module introduction and presentation PCA lecture	PCA lab-R
	<b>Day 2 :</b>	CA/MCA lecture Exercises (application of MCA lecture)	MCA lab-R Group project
	<b>Day 3 :</b>	Clustering + Sequence analysis lecture	Clustering lab R Group project
	<b>Day 4 :</b>	Latent class analysis (LCA)	Conference –Cindy Padilla Group project
	<b>Day 5 :</b>	Other statistical approaches (LCA) Conference - Maxime raffray	Group project
<b>Resources</b>	François Husson youtube channel <a href="https://www.youtube.com/channel/UCyz4M1pwJBNfjMFaUCHCNUQ">https://www.youtube.com/channel/UCyz4M1pwJBNfjMFaUCHCNUQ</a>		
<b>Course requirement</b>	Students are expected to attend all lectures and seminars. Class attendance will be checked accordingly. Students are expected to read and analyse selected papers for the group work before the courses.		
<b>Grading and assessment</b>	Group project (started in class and due for December 15th, 11:00 pm ) accounting for 80% + morning Quiz accounting for 20% of the final grade.		
<b>Course policy</b>	<p><b>Attendance &amp; punctuality</b>  <b>Regular and punctual class attendance is a prerequisite for receiving credit in a course.</b>  Students are expected to attend each class. Attendance will be taken at each class.  The obligations of attendance and punctuality cover every aspect of the course: - lectures, conferences, group projects, assessments, examinations, as described in EHESP Academic Regulations <a href="http://mph.ehesp.fr">http://mph.ehesp.fr</a> EHESP Academic Regulation Article. 3).  If students are not able to make it to class, they are required to send an email to the instructor and to the MPH program coordinating team explaining their absence prior to the scheduled class date. All supporting documents are provided to the end-of-year panel.</p> <p>Students who miss class are responsible for content. Any student who misses a class has the responsibility for obtaining copies of notes, handouts and assignments. If additional assistance is still necessary, an appointment should be scheduled with the instructor. Class time is not to be used to go over material with students who have missed class.</p> <p><b>Lateness:</b> Students who are more than 10 minutes late may be denied access to a class. Repeated late arrivals may be counted as absences (See <a href="http://mph.ehesp.fr">http://mph.ehesp.fr</a> EHESP Academic Regulation Article. 3 Attendance &amp; Punctuality)</p> <p><b>Maximum absences authorized &amp; penalty otherwise</b>  Above 20% of absences will be designated a fail for a given class. The students will be entitled to be reassessed in any failed component(s). If they undertake a reassessment or they retake a module this means that they cannot normally obtain more than the minimum pass mark (i.e. 10 out of 20)</p> <p><b>Exceptional circumstances</b>  Absence from any examination or test, or late submission of assignments due to illness, psychological problems, or exceptional personal reasons must be justified; otherwise, students will be penalized, as above mentioned. Students must directly notify their professor or the MPH academic secretariat before</p>		

	<p>the exam or before the assignment deadline. Before accepting the student's justification, the professor or the MPH academic secretariat has the right to request either a certificate from the attending physician or from a psychologist, or from any other relevant person (See <a href="http://mph.ehesp.fr">http://mph.ehesp.fr</a> EHESP Academic Regulation Article 4 Examinations).</p> <p><b>Courtesy:</b> <u>All cell phones/pages MUST be turned off during class time.</u> Students are required to conduct themselves according to professional standards, eating during class time is not permitted during class time, such as course or group work.</p>
<p><b>Valuing diversity</b></p>	<p>Diversity enriches learning. It requires an atmosphere of inclusion and tolerance, which oftentimes challenges our own closely-held ideas, as well as our personal comfort zones. The results, however, create a sense of community and promote excellence in the learning environment. This class will follow principles of inclusion, respect, tolerance, and acceptance that support the values of diversity. Diversity includes consideration of: (1) life experiences, including type, variety, uniqueness, duration, personal values, political viewpoints, and intensity; and (2) factors related to "diversity of presence," including, among others, age, economic circumstances, ethnic identification, family educational attainment, disability, gender, geographic origin, maturity, race, religion, sexual orientation and social position.</p>
<p><b>Course evaluation</b></p>	<p>EHESP requests that you complete a course evaluation at the end of the school year. Your responses will be anonymous, with feedback provided in the aggregate. Open-ended comments will be shared with instructors, but not identified with individual students. Your participation in course evaluation is an expectation, since providing constructive feedback is a professional obligation. Feedback is critical, moreover, to improving the quality of our courses, as well as for instructor assessment.</p>
